

Photos 1 of 2

- Total of 7 photos.
- Photo 1 and 2 are the most important and must be full face. Photo 3-7 are all supplementary.

1. FULL FACE EXAGGERATED SMILE

- Please use a [smart phone](#).
- Camera is level to the face. Photos taken at an angle will distort our ability to idealize the teeth.
- Please tape mustaches away from the teeth. The picture is only useful if the teeth are visible relative to the face.
- If a patient has gingival display, we need to know by how much to reduce bone/hide the transition line accordingly.

2. FULL FACE RETRACTED

- Please remove glasses as they distort our ability to set the midline.
- Recommend turning the grid feature on your phone camera and aligning one of the horizontal lines to the pupils.

3. BITE PHOTOS ZOOMED IN

4.

Photos 1 of 2

Repose and profile photos for determining lip support and prosthetic options. These pictures help facilitate discussions regarding removeable vs. fixed prosthetics.

5. FULL FACE REPOSE

6. PROFILE SMILING
